

Medlane Diagnostic Solutions, Inc.

Business Management System Proposal 13 Gumamela Street, Pilar Village, Las Piñas, Philippines, 1781

SYSTEM PROPOSAL

Medlane OS for Diagnostic Equipment & Reagent Distribution

A centralized web-based system for inventory, lot and expiry tracking, SI/TS/DRS invoicing, collections, supplier payables, warranty records, client purchase history, analytics, reports, old data migration, workflow recommendations, map-based collection tracking, automated email reminders, Google Sheets support, and role-based access across Las Pinas and Naga.

PREPARED FOR

**Medlane Diagnostic
Solutions**

RECOMMENDED PACKAGE

Basic MVP

PROJECT COST

PHP 40,000

Prepared as a preliminary estimate. Final pricing depends on final reports, invoice layouts, data migration volume, approval workflows, and hosting decisions.

Project Goals

Inventory Accuracy

Track branch stock, lot number, serial number, expiry date, and stock movement.

Sales & AR Visibility

Monitor SI/TS/DRS sales, terms, due dates, collections, and outstanding balances.

Workflow Efficiency

Guide users to the next task, reduce repetitive encoding, and prevent common data errors before save.

Core Features

FEATURE	PURPOSE
Role-Based Login	Admin, CEO, Accounting, Sales, Logistics, and HR users only see modules relevant to their work.
Dashboard & Analytics	Visualizes sales by branch, AR status, collection efficiency, top items, stock health, future growth indicators, and recommended actions.
Workflow Assistant	Shows module-specific task queues and recommendations so users can open urgent AR, low stock, missing documents, approvals, imports, and reconciliation checks faster.
Masterlists	Central records for clients, items, suppliers, banks, and employees with duplicate client/TIN, duplicate item, duplicate bank, and document-completion checks.
Inventory Management	Records received stocks, lot numbers, expiry dates, serial numbers, minimum levels, branch transfer, low-stock filters, FEFO recommendations, and bulk receiving actions.
Near-Expiry Sales Alert	Flags reagents/items near expiry so Sales can prioritize movement before expiry risk increases.
Invoicing	Creates SI, TS, and DRS layouts with automatic address, TIN, tax, net amount, item terms, FEFO lot autofill, exact-lot stock deduction, discount approval checks, duplicate document blocking, and credit-limit validation.
Collections	Records cash, cheque, bank deposit, bank transfer, partial payments, due dates, receipt numbers, cheque details, AR status, and payment-over-balance prevention.
Collection Contact Map	Displays a Philippines map using projected regional overlays, including NCR and CAR, with collection-status colors and clickable region/client follow-up queues.
Receivables Tracker	Groups open AR by client and invoice stage with order-style timelines, status tabs, invoice drilldowns, and direct collection follow-up actions.
Payables	Tracks supplier bills, cheque numbers, bank details, paid/partial status, payment voucher-ready information, and cheque-only field validation.
Replenishments	Allows petty cash and per diem requests with HR and Accounting approval flow.
Equipment Warranty Tracking	Tracks equipment serial numbers, installation dates, warranty end dates, service notes, and warranty status.
Client Purchase History	Shows what each client bought, order count, lifetime value, AR balance, and last purchase date.
Old Data Migration	Includes migration of existing Excel, CSV, Google Sheets, and available historical records into the new platform's structured client, product, inventory, sales, collection, supplier, and warranty modules.
Import Safety Checker	Checks pasted CSV rows for missing fields, unsupported areas, and duplicate clients before import so unsafe spreadsheet rows are blocked.

FEATURE	PURPOSE
Fix-Oriented Reconciliation	Runs scoped reconciliation checks for documents, payments, client documents, credit exposure, stock transfers, and data gaps with direct fix buttons and saved run history.
Notifications With Actions	Operational alerts can open the related module or record directly, reducing manual searching across tables.
Automated Emails & Reminders	Sends or queues reminders for collections, overdue AR, pending approvals, low stock, near-expiry lots, cheque follow-ups, and report notifications.
Google Sheets Support	Supports Google Sheets-based import/export workflows for clients, products, inventory, sales, collections, reports, and migration handoff files.
Audit Logs	Tracks edits, imports, exports, inventory adjustments, payment posting, and user activity for accountability.

Recommended Enhancements for Medlane

Warranty & Service History

Useful for diagnostic equipment clients that need installation, calibration, maintenance, and warranty support.

Client Purchase History

Helps Sales identify repeat orders, preferred products, and clients with growing AR exposure.

Near-Expiry Alerts

Supports faster reagent movement and reduces potential inventory loss from expired products.

Old Data Migration

Transfers existing spreadsheet and historical business records into the new system so Medlane can continue operations with prior data available.

Workflow Assistant

Gives each role a practical task queue for overdue AR, low stock, missing documents, approvals, and reconciliation fixes.

Philippines Collection Map

Uses real region boundary overlays, including NCR and CAR, to visualize follow-up status by area and dealer coverage.

Automated Reminders

Helps Accounting and Sales send timely follow-ups for overdue AR, near-due accounts, approvals, and operational alerts.

Google Sheets Workflow

Supports spreadsheet-based imports, exports, and migration review for teams that still rely on Google Sheets.

Workflow Automation and Error Prevention

Task Queues

Action queues show what to collect, approve, receive, reconcile, or complete next instead of relying on manual checking.

Autofill

Client, item, payment, warehouse, FEFO lot, receipt, tag, and balance fields are pre-filled where possible to reduce repetitive encoding.

Save-Time Validation

The system blocks duplicate documents, duplicate receipts, invalid cheque records, expired lots, missing lot/expiry, overpayments, and unsafe imports.

Basic MVP Package

PACKAGE	SCOPE	PROJECT COST
Basic MVP	Login, dashboard, workflow assistant, masterlists, inventory, sales, invoicing, collections, collection contact map, AR tracker, automated emails and reminders, Google Sheets import/export support, payables, replenishments, warranty tracking, client purchase history, near-expiry sales alert, old data migration from existing spreadsheets/records, CSV import with safety checks, simple reports, analytics, reconciliation, role access, notifications, and audit logs.	PHP 40,000

Included support: 2 months free requested changes, bug fixes, and basic maintenance from the developer after turnover.

Free Support Inclusion

 Requested Changes Minor adjustments requested by Medlane within 2 months after turnover are included, as long as they are within the agreed Basic MVP scope.	 Bug Fixes Issues caused by the delivered system will be corrected during the free support period.	 Basic Maintenance Includes light monitoring, minor corrections, guidance, and assistance while the team starts using the system.
---	--	---

Suggested Implementation Phases

PHASE	SCOPE	TIMELINE
1. Finalization	Review files, confirm columns, clean old data sources, invoice layouts, reports, roles, approval rules, map areas, and workflow priorities.	3-5 days
2. Basic MVP Build	Build the daily-use modules: login, workflow assistant, masterlists, inventory, sales, invoicing, collections, AR tracker, automated emails/reminders, Google Sheets support, payables, replenishments, warranty, purchase history, CSV import, reports, reconciliation, and audit logs.	3-5 weeks
3. Data Migration, Testing & Turnover	Migrate agreed old records into the new platform, perform client testing, bug fixing, sample data validation, workflow validation, basic training, and launch support.	1 week

Monthly Hosting and Storage Estimate

ITEM	PURPOSE	MONTHLY ESTIMATE
Supabase Pro	Database, authentication, backend, and daily operational records.	USD 25 / month
Cloudflare R2 500GB	File storage for invoices, receipts, BIR/SEC/FDA/COA files, warranty documents, and attachments.	About USD 7.35 / month
Base Infrastructure Estimate	Supabase Pro + approximately 500GB R2 file storage.	About USD 32.35 / month

Approximate PHP estimate: PHP 1,800 - 2,500 per month, depending on exchange rate, taxes, actual file storage, and usage.

This estimate excludes domain name, paid email or messaging provider fees, third-party integration fees, and any storage beyond the planned 500GB capacity.

Next Steps

- Review Medlane's current spreadsheets, old records, invoice layouts, report samples, and document folders.
- Confirm the final module list, fields, user roles, approval rules, reminder templates, Google Sheets workflow, and data migration requirements.
- Approve the selected package and implementation timeline.
- Begin Phase 1 workflow and data finalization.
